Orthomosaic Overview

This high-resolution orthomosaic map was generated from aerial imagery captured during a drone mapping mission. Individual images were processed and stitched together to create an accurate overhead view of the property. The resulting map provides a detailed visual reference suitable for documentation, planning, inspections, measurements, and project records.

Sample Observation

The red circle identifies the sample subject property used for this demonstration report. The orthomosaic image provides a high-resolution aerial overview of the property and surrounding area, illustrating how mapping data can be presented for documentation, planning, inspections, and project reference.
